Step 1. The position error grows with the age
position error (m)
tolerance
0
1
2
3
age (s)
Step 2. The object becomes less reliable
reliability
1.0
0.5
0.0
age (s)
Step 3. Each update brings the reliability back up
reliability
average
an update arrives
time (s)
Step 4. A target reliability sets the update rate
average reliability
target
rate needed
updates per second
